EDUCATION

University of North Carolina at Charlotte

MS Data Science and Business Analytics

Charlotte, NC

Expected May 2028

BS Data Science, Early Entry to MS

Expected May 2027 | GPA: 4.00

- **Graduate Coursework:** Database Systems for Business Analytics (SQL), Business Intelligence
- **Undergraduate Coursework:** Calculus I-II, Linear Algebra, Statistics I-II, Data Structures, Database Design, Applied Data Science I-III

CERTIFICATIONS & TECHNICAL SKILLS

Languages: Python, SQL (PostgreSQL, MySQL), JavaScript

Data & ML: pandas, NumPy, scikit-learn, statsmodels, matplotlib, seaborn, feature engineering, regression, classification, time series forecasting, cross-validation, model evaluation

Cloud & Tools: AWS (DynamoDB, Amplify), Git/GitHub, Jupyter, VS Code, Flask, Tableau, Excel

Analytics: exploratory data analysis, hypothesis testing, A/B testing, ETL pipelines, data validation, dashboarding, risk modeling

Certifications: AWS Certified Cloud Practitioner (CLF-C02), Jan 2026 | Python PCAP, May 2023

WORK EXPERIENCE

DAAD RISE Germany Research Intern – Data Engineering & Visualization

May 2026 – Aug. 2026

Hochschule Landshut

Landshut, Germany

- Diagnosed station-naming inconsistencies across **34 weather stations**, up to **5 variants** per station, that were silently excluding roughly **80%** of forecast predictions from a **1.26M-record** DynamoDB table
- Identified a timestamp-rounding bug misaligning hourly model predictions against 15-minute ground-truth data, correcting it to recover up to **2 years** of hidden prediction history for multiple stations
- Built read-only, cost-efficient DynamoDB access patterns — key-condition queries, pagination, count-projections — against a **1.5M-record** fused dataset spanning **34 stations**, avoiding full-table scans at multi-million-item scale
- Shipped two React/TypeScript dashboards (Chart.js) into the team's production repository via a reviewed pull request: a frost-event detection tool surfacing model evaluation metrics (**MAE 1.8–3.3°C**) and a data-quality monitor with configurable coverage thresholds
- Fixed a production authentication bug blocking direct-URL navigation app-wide, resolved and merged into the shared team codebase

Growth & Marketing Analytics Intern – FinTech Risk Platform

Mar. 2026 – May 2026

Risk in Mind

Remote

- Drove go-to-market analysis for an AI credit-risk platform serving credit unions and regional financial institutions
- Segmented and prioritized **200** target institutions by asset tier (**\$100M–\$5B AUM**), headcount (**50–500**), and region
- Positioned **4 product modules** – loan application review, tax and bank statement parsing, credit card risk analysis – around underwriting automation, fraud detection, and CECL compliance

Data Steward – Outcome Reporting & Data Systems

Jan. 2026 – May 2026

Charlotte Family Housing

Charlotte, NC

- Audited Salesforce housing data workflows spanning **4 service stages** and **6 post-exit checkpoints** (1–24 months)
- Diagnosed reporting failures rooted in redundant fields, manual categorization, and **60%** post-exit survey completion
- Designed survey and intake workflow revisions projected to raise post-exit completion from **60% to 70%**, delivered to program leadership
- Authored data governance standards for collection, audit cadence, automation, and retention, adopted into Economic Mobility Bridge reporting

Digital Systems & Automation Intern

Feb. 2026 – May 2026

Center for ADVANCing Faculty Success (CAFS)

UNC Charlotte

- Automated faculty event RSVP and registration pipelines, replacing manual intake, response tracking, and attendance handling with structured digital workflows
- Rebuilt WordPress faculty support platform structure and navigation, improving content discoverability

PROJECTS

Stock Downside Risk Prediction Project

2026

Portfolio Write-Up | [GitHub](#) | *Python, pandas, scikit-learn, Alpha Vantage API*

- Built regression models to estimate **5-day downside risk**, defined as the maximum expected percentage drop over the next five trading days
- Engineered market features including RSI, Bollinger Band width, price-to-moving-average ratio, MACD difference, volume spike, and EPS surprise ratio
- Compared random against time-based splits and found the full-feature linear model strongest under time-aware evaluation, explaining **49%** of downside-risk variance (MAE, RMSE, R^2), while tree-based models degraded

Credit Risk Classification Project

2026

Portfolio Write-Up | [GitHub](#) | *Python, pandas, scikit-learn*

- Built logistic regression, decision tree, and random forest models to predict serious financial delinquency in a dataset with about **6.7%** default cases
- Evaluated recall, precision, ROC-AUC, and confusion matrices to address class imbalance instead of relying on accuracy alone
- Lowered the classification threshold from **50% to 20%**, increasing tree-based model recall from roughly **15%–18% to about 50%**

Russia Macroeconomic Analysis Project

2026

Portfolio Write-Up | [GitHub](#) | *Economic Data Analysis, Visualization, Macroeconomic Research*

- Analyzed **30+ years** of Russia's macroeconomic evolution after 1993, focusing on GDP growth, inflation, exchange-rate instability, sanctions, and energy dependence
- Connected macroeconomic indicators to historical shocks, commodity cycles, and policy shifts through a written portfolio analysis

HONORS & COMPETITIONS

1st Place – Red Ventures Case Competition

Hosted by Red Ventures

Feb. 2026

- Won **1st place** by analyzing Best Colleges' competitive position against Google AI and emerging education technology platforms
- Identified retention weaknesses in the user journey and proposed product improvements focused on long-term engagement

3rd Place – Zerve AI Datathon

Hosted by Association of Data Science

Feb. 2026

- Placed **3rd overall** after building a REM framework to evaluate retention, engagement, and monetization across user cohorts
- Found that **25%** of users generated **96%** of revenue, with early active users driving disproportionate lifetime value
- Recommended weekly credit incentives to improve retention among high-impact users and strengthen monetization
